TABLE OF CONTENTS

DEFINITION OF TERMS AND ABBREVIATIONS

Abbreviation/ concept	Definition
AFC	Agricultural Finance Corporation
ASCA	Accumulating Savings and Credit Association
ATM	Automated Teller Machine
Basic phone	CANNOT access internet, CANNOT send and receive email, does NOT have a camera/radio/media player
CBK	Central Bank of Kenya
Chama	Informal group
CMA	Capital Markets Authority
CRB	Credit Reference Bureau
DFI	Development Finance Institution
DFS	Digital financial service
DT–Sacco	Deposit Taking SACCO
EA	Enumeration Area
Equitel	A mobile app and Mobile phone–based banking services by Equity Bank Limited
Feature phone	CAN access internet, CAN send and receive email, has a camera/radio/media player, CANNOT download and install applications on the phone
Financial needs based framework	The Financial Needs framework based on Insight to Impact's (i2i) pioneering methodology, which measures the extent to which financial devices are being used to meet people's financial needs
FSD Kenya	Financial Sector Deepening Trust Kenya
HELB	Higher Education Loans Board
i2i	Insight to impact
ICDC	Industrial and Commercial Development Corporation
In kind	Refers to payment in form of a service or product but not in cash
Income earner	Individual who has work and/or investments that provide a defined income stream on a regular basis
IPA	Innovations for Poverty Action
IRA	Insurance Regulatory Authority
JLB	Joint Loans Board

Abbreviation/ concept	Definition
KDIC	Kenya Deposit Insurance Corporation
KIE	Kenya Industrial Estate
KISH	Sampling method for randomly selecting an individual in the household
KNBS	Kenya National Bureau of Statistics
KSh	Kenya Shilling
KYC	Know Your Customer
Merry–go–round	A group in which the members contribute a fixed amount for a fixed duration, and each member is paid the entirety of the collected money on a rotating schedule
MFB	Microfinance bank
MFI	Microfinance Institution
MNO	Mobile Network Operator
Mobile Money / Digital Apps	Financial services provided through mobile phone–based software applications such as BRANCH, TALA, etc.
Mobile phone banking	Mobile phone–based banking services and products by commercial banks such as Timiza, HF Whizz, M-Coop Cash, M-Shwari, Eazzy loan, and T-Kash.
Mobile money	Mobile phone financial services or simply mobile money offered by MNO
MTP	Kenya Vision 2030 Medium Term Plan
NASSEP	National Sample Survey and Evaluation Programme
NHIF	National Hospital Insurance Fund
NSE	Nairobi Securities Exchange
NSSF	National Social Security Fund
POS	Point of Sale Device
Poverty Probability Index (PPI)	A poverty measurement tool designed by IPA, which uses 10 questions about a household's characteristics and asset ownership which are scored to compute the likelihood that the household is living below the poverty line.
QTC	Questionnaire Technical Committee
RBA	Retirement Benefits Authority
ROSCA	Rotating and Savings Credit Associations
SACCO	Savings and Credit Co–operative
SASRA	Sacco Societies Regulatory Authority
Smart phone	A phone that CAN download and install applications
UNYMC	United Nations International Year of Microcredit
Wealth quintile	Each household respondent is given an affluence score based on household assets. The population is equally divided into groups (quintiles) and each respondent is placed in their corresponding quintile based on the level of affluence/ social strata

FOREWORD

It gives us great pleasure to present to our stakeholders the Financial Access (FinAccess) Household Survey 2019. Since 2006, FinAccess surveys have been established as the leading source of reliable data on financial access and usage in Kenya, and is widely relied on by the media, Government, researchers and development partners. The 2019 Survey seeks to improve on this track record by providing information beyond the conventional measures of access and usage. It provides new information on the quality and impact dimensions, examining financial health and livelihoods, consumer protection, financial literacy in addition to probing more deeply on the frequency of usage. The survey further includes independent business and agriculture modules to better understand usage of financial products and services within these livelihoods, crucial for the development of an all-inclusive financial ecosystem for all Kenyans.

Measurement of financial inclusion in Kenya commenced in 2006 through the creation of FinAccess surveys implemented over the years by the Central Bank Kenya (CBK), Kenya National Bureau of Statistics (KNBS) and Financial Sector Deepening (FSD) Kenya. Given the fast pace of financial sector development in Kenya, the FinAccess Survey constitutes an important tool for monitoring financial inclusion trends and dynamics, thus informing policy and industry on progress towards pro-poor and pro-growth financial sector development. Both the Central Bank of Kenya and The National Treasury and Planning have relied on FinAccess data to inform the development of policies that support inclusion. These include agency banking and national payments regulations as well as initiatives to improve transparency in the sector. Data generated from these surveys is also widely used by the private sector, development partners and researchers.

The 2019 Survey was jointly conducted by KNBS, CBK and FSD Kenya. The Statistics Act, 2006 is the legal framework under which these surveys are conducted. The implementation of 2019 FinAccess Survey followed the set statistical methodological standards of conducting surveys that promote best practices in the production cycle of survey planning and design, data collection, analysis and reporting. The survey targeted individuals aged 16 years and above, from scientifically selected households, designed to provide estimates at the national and regional level and by residence (rural and urban areas). The household sample selection was drawn from the fifth National Sample Survey and Evaluation Programme (NASSEP V) household sampling frame. KNBS gives assurances that the survey results are sound and will provide useful insights in making informed decisions on financial deepening and greater inclusion across the country. We, therefore, encourage all to use the data to promote evidence- based decision making.

The 2019 survey findings clearly show that Kenya's financial inclusion landscape has undergone a transformation since 2006. Formal financial inclusion has risen to 82.9 percent, up from 26.7 percent in 2006, while complete exclusion has narrowed to 11.0 percent from 41.3 percent in 2006. Furthermore, the disparities in financial access between rich and poor, men and women, and rural and urban areas have also declined remarkably. Key drivers of these changes include: the growth of mobile money, government initiatives and support, and developments in information and communications technology (ICT). The significant reduction in the proportion of the adult population totally excluded from financial services and products vindicates the policies, strategies and reforms undertaken by the government as well as the widespread adoption of digital technology and innovations by financial sector players. These have helped in deepening financial inclusion by enabling the population to overcome infrastructural constraints to access especially in rural areas.

Despite the progress made so far, affordability and consumer protection issues such as unexpected charges remain barriers to formal service access. Even more notable is the considerable modesty of the developmental impact of formal financial access. Many Kenyans have formal accounts in various forms, but these accounts are rarely used because they are not solving real day-to-day problems for many households, smaller and micro scale businesses and farmers. Considerable reliance remains on the use of informal instruments – clearly demonstrated through the needs-based framework, an innovation in the 2019 FinAccess survey questionnaire.

The survey results will help unravel the constraints that still impede financial inclusion and foster the design of policy measures, products and delivery channels that match the population needs. Existing literature has demonstrated that demand for financial services and products from the poor, low-income households, micro- and small- scale businesses and farmers grow when the financial service providers understand what each population segment uses and values. It is only through good understanding of the needs of stakeholders, that services and products can be made more affordable, convenient, flexible, reliable, safe and sustainable to support the development of a more inclusive financial ecosystem for all Kenyans. In addition, given the significance of the data from FinAccess surveys, it is our hope that more private sector players will join the CBK, KNBS and FSD Kenya in supporting future surveys. We thank Airtel Kenya, Kenya Post Office Savings Bank, Diamond Trust Bank (DTB) and NIC bank for financially supporting the 2019 survey.

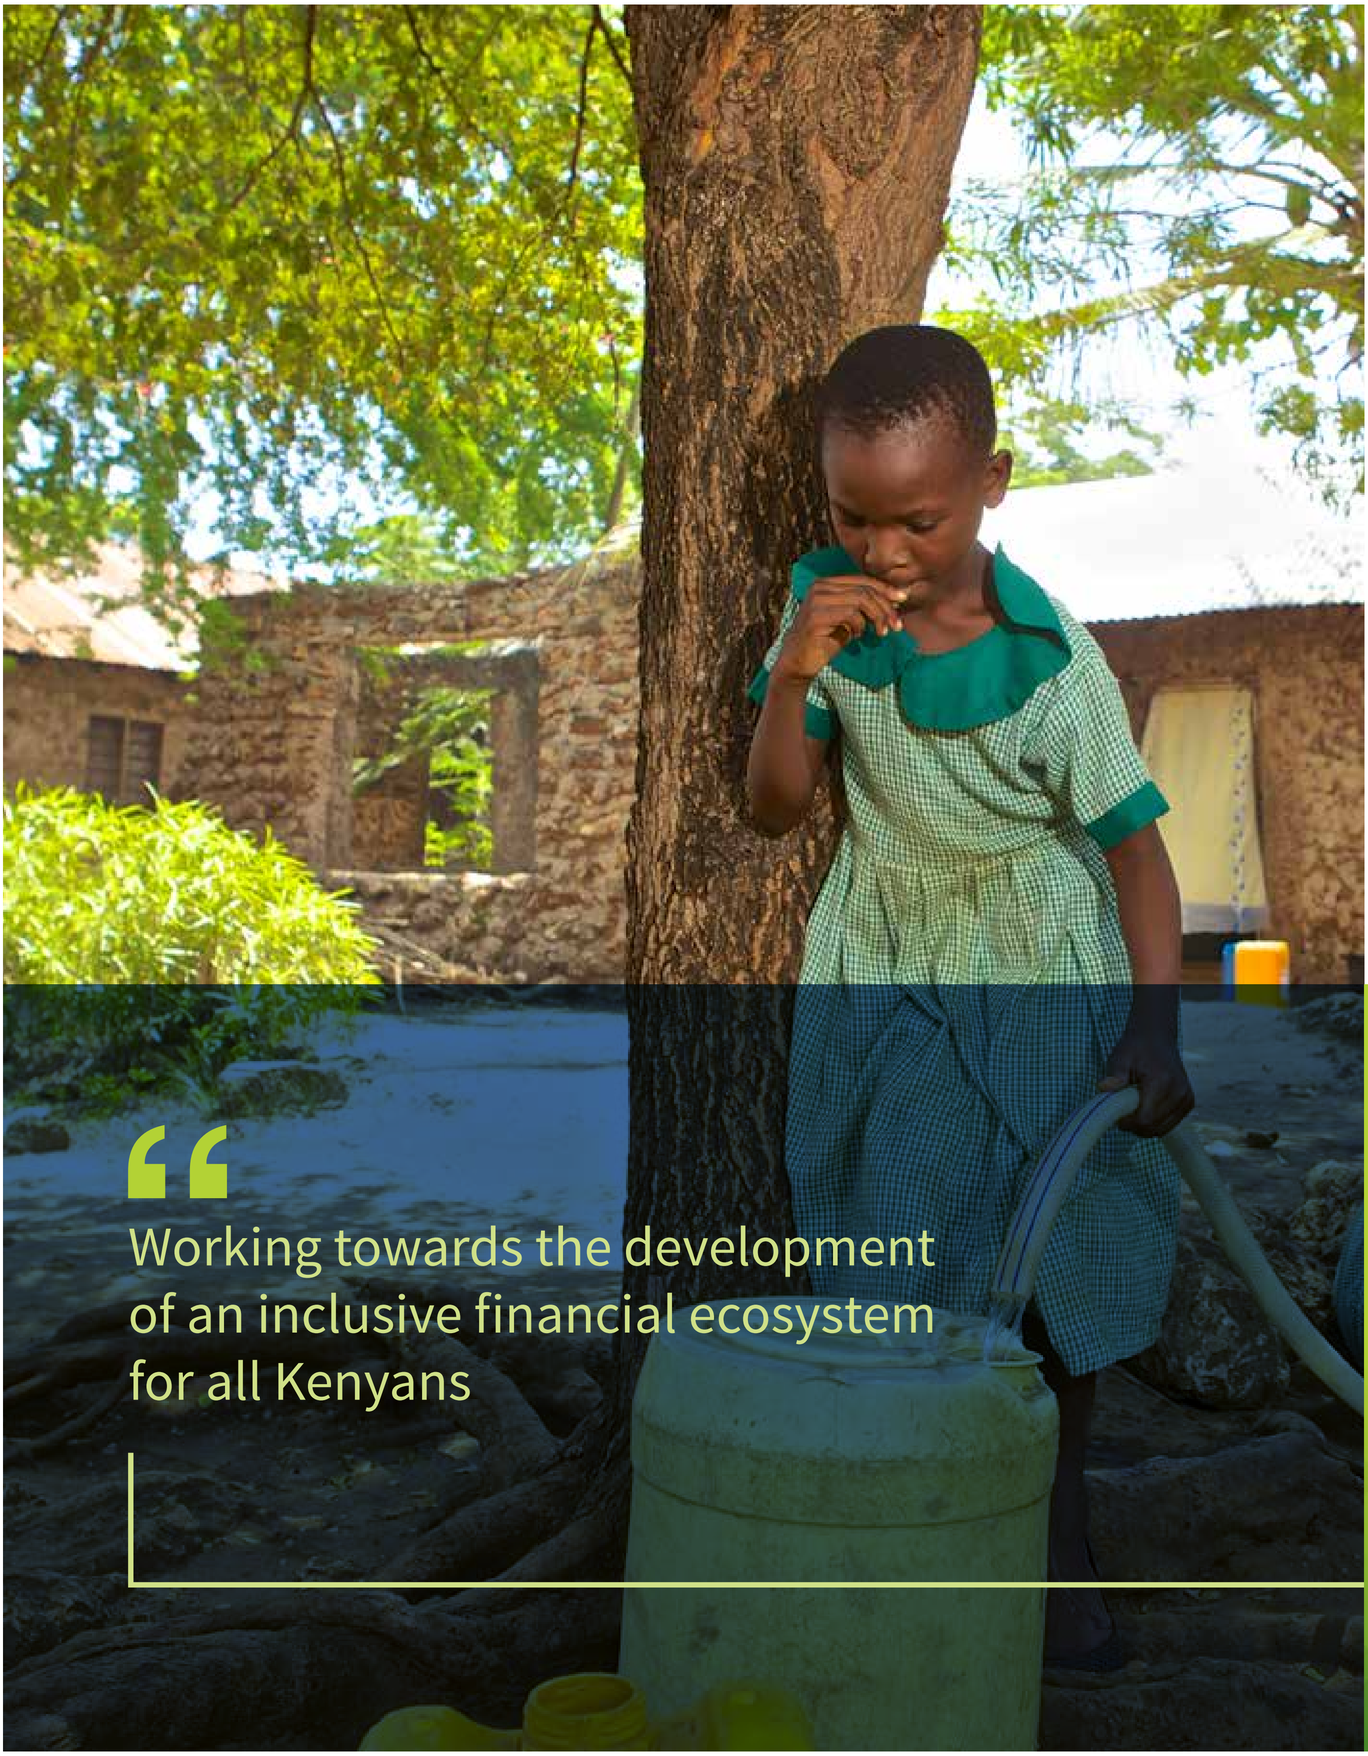
ACKNOWLEDGEMENT

This survey was made possible through the public-private partnership collaborative efforts of the Kenya National Bureau of Statistics (KNBS), Financial Sector Deepening Trust (FSD) Kenya and the Central Bank of Kenya (CBK) with funding contribution from Airtel Kenya Limited, Kenya Post Office Savings Bank, NIC Bank and Diamond Trust Bank. We take this opportunity to thank the leadership of the three institutions, namely Dr Patrick Njoroge, Governor and Ms Sheila M'Mbijjewe, Deputy Governor of the CBK, Mr Zachary Mwangi, Director General of the KNBS and Dr David Ferrand, Director of FSD Kenya for their direction, stewardship, guidance and unwavering support.

We also thank the Financial Access Management (FAM) Team comprising Mr Raphael Otieno, Acting Director of the Research Department at the CBK supported by Mr Daniel K.A. Tallam, Assistant Director, Financial Sector Analysis Division in the Department; Mr Collins Omondi, Director of Macroeconomic Statistics, KNBS; and Dr Amrik Heyer, Head of Research (FSD Kenya) for providing invaluable support and guidance in planning and conducting the survey. Overall co-ordination was led by Dr Isaac Mwangi of CBK supported by Mr. William Etwasi of KNBS and Ms. Geraldine Makunda of FSD Kenya. Immense support was provided throughout the survey by staff from the three partner institutions, namely: CBK (Mr Cappitus Chironga and Ms. Maria N. Ng'ethe), KNBS (Benjamin Avusevwa, John Bore, Mutua Kakinyi, Paul Samoei, Paul Waweru, Peter Kamau, Samuel Kipruto, Tabitha Wambui and Zachary Ochola) and FSD Kenya (Peter Gakure).

The Team was supported by Mr Amos Odero, Mr. David Taylor, Mr. Paul Gubbins and Ms. Carol Matiko consultants with FSD Kenya, and the Communication team comprising of Mr Wallace Kantai and Chris Mwangi of CBK Communications Office as well as Winnie Mokaya and Conrad Karume of FSD Kenya, and Trizer Mwanyika of KNBS who dedicatedly designed the layout of the report and provided media support. We take this opportunity to also recognise and thank all other persons who in one way or another contributed to this survey including officers from the three partner institutions involved in the field work, administrative and logistical coordination. Lastly, special thanks go to Ipsos Kenya, insight to impact (i2i) and Innovations for Poverty Action (IPA) for providing advisory input in designing and incorporating new concepts into the questionnaire.

Asanteni Sana!



> “Working towards the development of an inclusive financial ecosystem for all Kenyans

01

INTRODUCTION

This Financial Access (dubbed FinAccess) Household Survey 2019 is the fifth in a series of surveys that measure and track developments and dynamics in the financial inclusion landscape in Kenya from the demand–side. This follows the successful rollout of the 2006 baseline survey, and the subsequent FinAccess surveys of 2009, 2013 and 2016.

The surveys constitute an important tool for providing better measurement and understanding of the financial inclusion landscape in four dimensions – *Access, Usage, Quality* and *Impact/ Welfare*. This is in line with Kenya's Vision 2030 financial sector development agenda outlined in the Medium –Term Plan (MTP) III.

This Survey was conducted through a public-private sector partnership comprising the Central Bank of Kenya (CBK), the Kenya National Bureau of Statistics (KNBS) and Financial Sector Deepening Kenya (FSD Kenya) with funding support from Airtel Kenya Limited, Kenya Post Office Savings Bank (Postbank), Diamond Trust Bank (DTB) and NIC Bank.

finaccess

Survey objectives

- Strengthen financial inclusion measurement using demand–side data.
- Provide indicators that track progress and dynamics of the financial inclusion landscape in Kenya.
- Provide data to stakeholders including policy makers, private sector players and researchers.

The survey introduced new perspectives on measurement of financial inclusion by taking into consideration the improved usage dimension, needs based approach, and emerging innovations, while maintaining time series to track progress since 2006.

This chapter provides the survey rationale, approach and methodology, data processing and dissemination, and survey demographics as outlined below.

1.1 Economic context

The Kenyan economy remained strong and expanded at an average of 6 percent in the first three quarters of 2018 compared to 4.7 percent in the first three quarters of 2017. Inflation has remained within the CBK target range of 2.5-7.5 percent throughout 2018, reaching a 5-year low of 3.7 percent in April 2018 and then increasing moderately in the second half of 2018 to an average of 5 percent.

During 2018, CBK decreased its policy rate two times from 10 percent in January 2018 to 9.5 percent in March then to 9 percent in July 2018, and was retained at that level for the rest of the year. Following the introduction of interest rate controls in 2016, the Finance Act 2018 in September 2018 amended the Banking Act to remove the minimum interest on savings, which was previously set at 70 percent of the Central Bank Rate (CBR). The cap on lending rates was however retained at a maximum of 4 percentage points above CBR, restricting commercial banks' lending rate to a maximum of 13 percent.

1.2 Survey objectives

The survey objectives were to:

- Strengthen financial inclusion measurement using demand–side data;
- Provide indicators that track progress and dynamics of the financial inclusion landscape in Kenya; and
- Provide data to stakeholders including policy makers, private sector players and researchers.

Since the 2006 baseline survey, Kenya has made significant progress in fostering financial inclusion. The report presents the survey methodology and key findings to the public. The stakeholders will find the report useful in providing information on – *Access*, *Usage*, *Quality* and *Impact* – to support evidence–based decision making and financial services sector development that improves the value of financial services and products for all Kenyans. Additional analysis will be made available through issue–based reports as we encourage various researchers to write topical research papers. The data will also be disseminated through the KNBS, CBK and FSD Kenya websites and consultative fora with all stakeholders.

1.3 Survey methodology

This 2019 Survey was household population–based, targeting household individuals aged 16 years and above and designed to provide national, regional and residence (rural and urban areas) level estimates. The survey used the fifth National Sample Survey and Evaluation Programme (NASSEP V) household sampling frame. The frame consists of 5,360 clusters and is stratified into urban and rural areas within each of the 47 counties resulting in 92 sampling strata with Nairobi and Mombasa Counties being wholly urban. NASSEP V frame was designed in a multi-tiered structure with four sub-samples (C1, C2, C3 and C4) each consisting of 1,340 Enumeration Areas (EAs) that can serve as independent sampling frames. The frame used Counties as the first level stratification which were further stratified into rural and urban strata apart from Nairobi and Mombasa Counties which are classified as urban areas only, resulting in 92 strata. The sampling of EAs into the frame was done independently within each stratum. Each sampled EA was developed into a cluster through listing and mapping process that standardized them into one measure of size having an average of 100 households (between 50 households and 149 households). In situations where a stratum did not have sufficient clusters from the two sub-samples, the other sub-samples were included.

1.3.1 Survey instrument design

The survey instrument (questionnaire) was finalized by the Questionnaire Technical Committee (QTC), which draws membership from the three partner institutions with co-opted experts, scripted successfully and signed off by FAM to pave way for the piloting and commencement of the survey on October 1,2018. This followed several consultative fora with CBK internal departments, FSD Kenya, Ipsos Synovate Kenya, KNBS, Capital Markets Authority (CMA), SACCO Societies Regulatory Authority (SASRA), Insurance Regulatory Authority (IRA), and Retirement Benefits Authority (RBA). The 2019 survey introduced new perspectives on financial inclusion measurement including improved usage dimensions factoring in digital innovations, consumer protection, financial literacy, and over-indebtedness, etc.; aligned to global financial inclusion indicators; and incorporating the needs based approach, while maintaining time series to track progress since 2006.

1.3.2 Sampling

Sampling for the 2019 Survey utilized a two-stage stratified cluster sampling design. This was geared towards providing valid and reliable estimates at national level, regional levels and rural and urban areas separately. The first stage entailed selecting 1000 clusters from NASSEP V. The second stage involved random selection of a uniform sample of 11 households (434 in urban and 566 in rural areas) in each cluster from a roster of households in the cluster using systematic random sampling method.

The third stage involved selection of the individual at the household level using an inbuilt Computer Aided Personal Interview (CAPI) KISH grid to select one eligible individual (16+ years) from a roster of all eligible individuals in the household. All the selections were done without replacement. The data has been weighted back to the population to be representative at both the national level as well as at the regional levels. The distribution of the sample is shown in **Table 1.1**.

1.3.3 Piloting and scripting of the survey instrument

Piloting of the survey instrument was conducted in selected counties covering both rural and urban areas prior to the rollout of the survey across the country. Findings from the pilot exercise guided the final script that was used in the field. This was done to ensure that there was strict conformity to international standards of surveys and also in ensuring the flow, consistency and skip routines were observed.

1.3.4 Recruitment and training of fieldwork personnel

All survey personnel were centrally contracted by the KNBS on behalf of the three collaborating partner institutions – KNBS, CBK and FSD Kenya. The survey personnel comprised of coordinators and supervisors drawn from the three institutions, 15 Research Assistants (RAs) for the pilot exercise and 45 RAs for the main fieldwork data collection exercise.

The recruitment and eventual posting of the research assistants factored in their education and knowledge of local language in their areas of posting. This was aimed at increasing the efficiency of delivery of the questionnaire through verbal translations. In total, there were 45 research assistants and 15 supervisors. There were two trainings, one for the pilot survey and a subsequent one for the main survey exercise.

Table 1.1: Sample allocation for the 2019 finaccess household survey

	Allocation of Clusters			Allocation of households		
Region (Group of Counties)	Rural	Urban	Total	Rural	Urban	Total
Nairobi	na	74	74	na	814	814
North Rift	36	14	50	396	154	550
Central Rift	70	46	116	770	506	1276
South Rift	52	31	83	572	341	913
Nyanza	71	41	112	781	451	1232
Western	64	31	95	704	341	1045
Central	70	47	117	770	517	1287
Lower Eastern	52	32	84	572	352	924
Upper Eastern	18	13	31	198	143	341
Mid-Eastern	51	22	73	561	242	803
Coastal Region	45	25	70	495	275	770
North Eastern	37	19	56	407	209	616
Mombasa	na	39	39	na	429	429
Kenya	**566**	**434**	**1,000**	**6,226**	**4,774**	**11,000**

Note: Nairobi and Mombasa counties have only urban areas. na = Not applicable

1.3.5 Fieldwork data collection

Data collection employed the new technology of CAPI system which was developed by KNBS, as opposed to the traditional method of Paper Assisted Personal Interview (PAPI). Pilot exercise data collection started on September 9, in select Counties for a period of 6 days, while the main exercise commenced on October 1, 2018 and ended on December 15, 2018 for a period of 75 continuous working days including weekends and public holidays for all field teams.

1.3.6 Data processing – cleaning and weighting

Weights for the 2019 Survey were computed and applied to the primary datasets during analysis. This is because data from the survey was not self-weighting since the sample allocation was not proportional to the size of the strata. Additionally, some of the sampled households did not respond to the interviews, while others could not be accessed due to various reasons. Accordingly, the sample required weighting adjustments to cater for non-proportional distribution of clusters and non-response, in order to provide estimates that are representative of target population at national and sub-regional levels.

The design weights incorporated the probabilities of selection of the clusters from the census EAs database into the NASSEP V sample frame: the probabilities of selection of the survey clusters from NASSEP V frame; the probabilities of selection of the households from each of the sampled survey clusters; and the probabilities of selection of an individual among other eligible individuals at the household level. These design weights were then adjusted for individual, household and cluster non-response. Non-response was adjusted at stratum level. In doing this, the following mathematical relation was employed:

$$W_{hi}=D_{hi} \times \frac{S_{hi}}{l_{hi}} \times \frac{C_h}{c_h} \times \frac{I_{hij}}{1}$$

where;

W_{hi}	Overall cluster weight for the i-th cluster in the h-th stratum
D_{hi}	Sample cluster design weight obtained from cluster selection probabilities for the i-th cluster in the h-th stratum
S_{hi}	Number of listed households in the i-th cluster in the h-th stratum
l_{hi}	Number of responding households in i-th cluster in the h-th stratum
C_h	Number of clusters in h-th stratum
c_h	Number of selected clusters in the h-th stratum
I_{hij}	Number of listed eligible individuals within the j-th household in the i-th cluster in the h-th stratum

Eventually, the weights were adjusted to ensure consistency with the projected population figures. The weights were applied to each individual item to obtain estimates on any given variable in a specified domain or category.

Table 1.2: Survey response rates (%)

Result	Residence		Total
	Urban	Rural	
Household interviews			
Households Selected	4,774	6,226	**11,000**
Eligible households	4,148	5,561	**9,709**
Households interviewed	3,611	5,058	**8,669**
Household response rate	87.1	91.0	**89.3**

The survey achieved a response rate of 89 percent as shown in **Table 1.2.** In total, 11,000 households were selected for the survey out of which 9,709 were occupied at the time of the survey. Out of these occupied households, 8,669 households responded to the questionnaire representing a response rate of 89 per cent at the national level. There was a slight variation in response rates between urban and rural households of 87 percent and 91 percent, respectively.

1.4 Survey demographics

The survey sample was designed to achieve a statistically valid and reliable nationally representative sample of individuals aged 16 years and above. Unless otherwise stated, the report focuses on adults aged 18 years and above, which is the legal age for obtaining a national identification document that forms the main basis for Know Your Customer (KYC) identification document used by all financial service providers comply with KYC. The adult population (18 and above) comprised of 92.4 percent (25,104,967 people). The 16 to 17 year olds total 7.5 percent (2,040,042 people). The survey demographics are broken down as indicated in **Figure 1.1** and **Table 1.3.**

Figure 1.1: Demographics

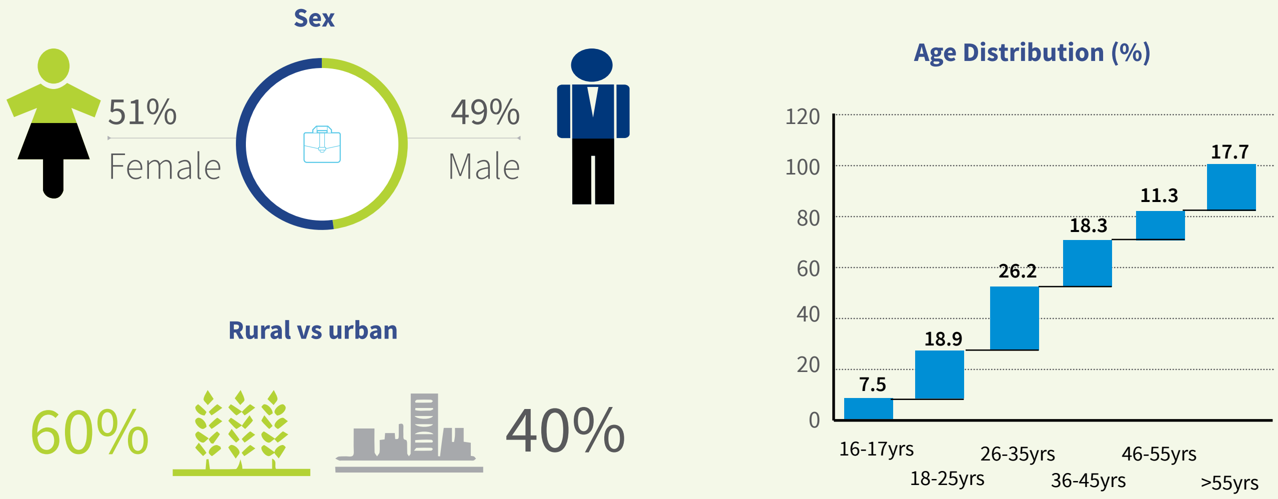


Table 1.3: Education by age (%)

Education level of Respondent	16-17yrs (%)	18-25yrs (%)	26-35yrs (%)	36-45yrs (%)	46-55yrs (%)	>55yrs (%)	Total (%)	N
None	0.8	4.5	6.7	9.7	10.4	33.6	11.6	3,141,306
Primary	32.9	33.2	44.1	49.2	47	45.7	42.8	11,607,789
Secondary	65.4	43.2	30.9	29.2	28.8	14.5	32.4	8,785,766
Tertiary	0.8	19	18.1	11.8	12.8	5.6	13	3,529,092
Other	0	0.1	0.2	0.1	0.9	0.6	0.3	81,056
Total	**100**	**100**	**100**	**100**	**100**	**100**	**100**	**27,145,009**

The rest of the report is organized as follows: Chapter Two presents Access to Financial Services and Products; Chapter Three – Usage of Financial services and Products; Chapter Four – Financial Relevance; Chapter Five – Financial Health and Livelihoods; Chapter Six – Consumer Protection and Financial Literacy; and lastly Chapter Seven – provides a Summary and Conclusion.

02

ACCESS TO FINANCIAL SERVICES AND PRODUCTS

This chapter tracks financial inclusion using the access dimension according to different measures. This is cross tabulated along the demographic characteristics of the population such as age, sex, education and the socio economic characteristics including livelihoods, income and expenditures.

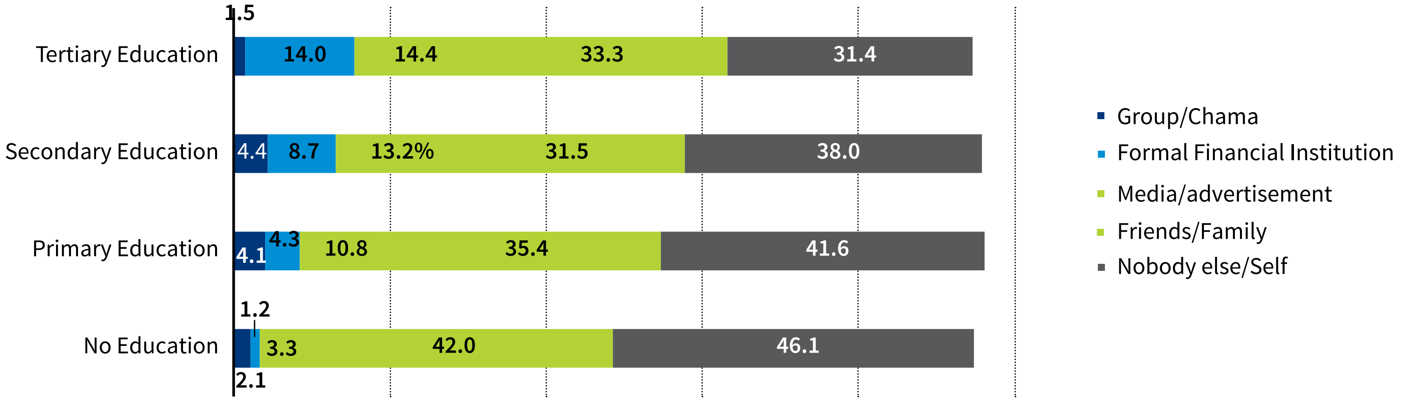
2.1 Access to financial services

Access to finance classifies consumers/users on the basis of registration and regulation (Formality and Informality) as well as the excluded as indicated in the **Table 2.1**. In particular, consumer is classified in the formal category if he/she has access to any formal financial service or product. However, the same consumer may also be accessing informal financial services or products. Where a consumer accesses only informal financial services or products, he/she is classified as informally included. A consumer who does not access any financial services or products from any formal or informal categories, he/she is classified as excluded.

6.1.2 Financial advice by education

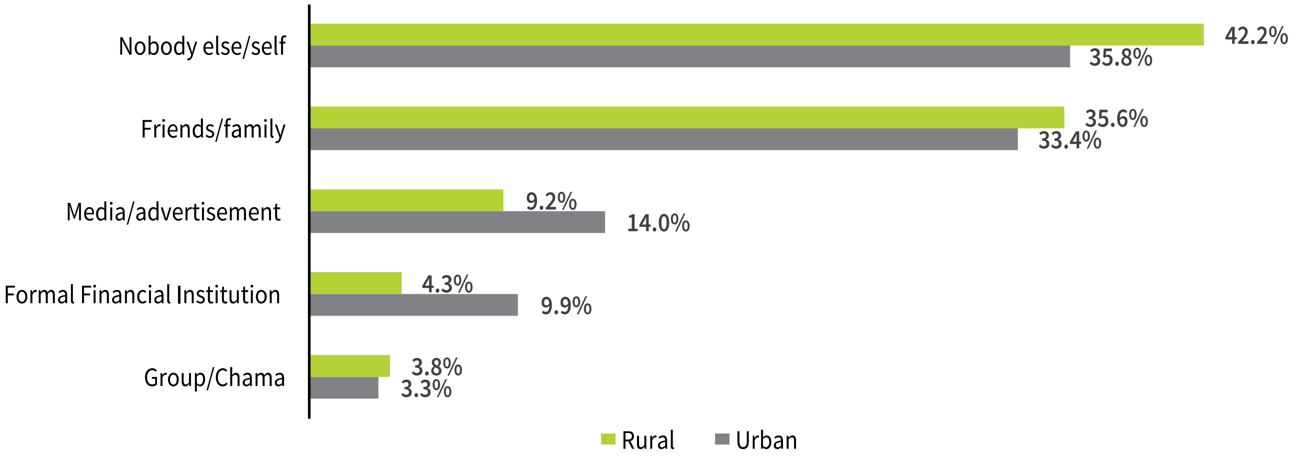
The survey results show that 46.1 percent of the population with no education and 41.6 percent with primary education relied on their own knowledge, in decision making on financial issues (**Figure 6.3**).

Figure 6.3: Sources of financial advice by education (%)



The results also indicate that more residents in rural areas (42.2 %) depend on their own knowledge in decision making on financial matters compared to 35.8 percent in urban areas (**Figure 6.4**).

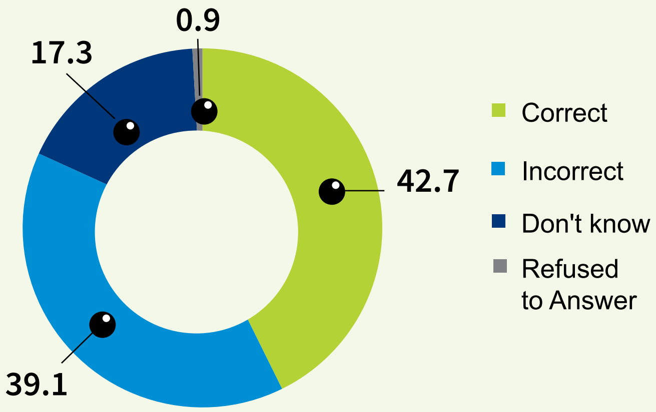
Figure 6.4: Financial advice by residence



6.2 Knowledge on cost of borrowing

Interest rates constitute an important component when determining the cost of borrowing. The survey tested the ability of respondents to accurately compute 10 percent interest on a KSh 10,000 loan. The survey findings indicate that 42.7 percent of the population answered the interest costs correctly, while 39 percent gave a wrong answer (**Figure 6.5**).

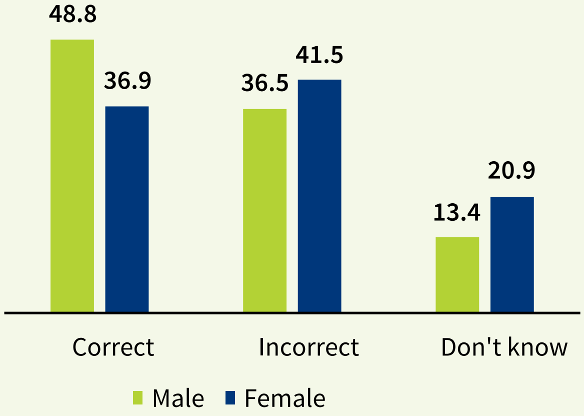
Figure 6.5: Knowledge on cost of borrowing(%)



6.2.1 Cost of borrowing by sex

The survey findings indicate that 48.8 percent of males answered interest costs correctly, compared to 36.9 percent of females (**Figure 6.6**).

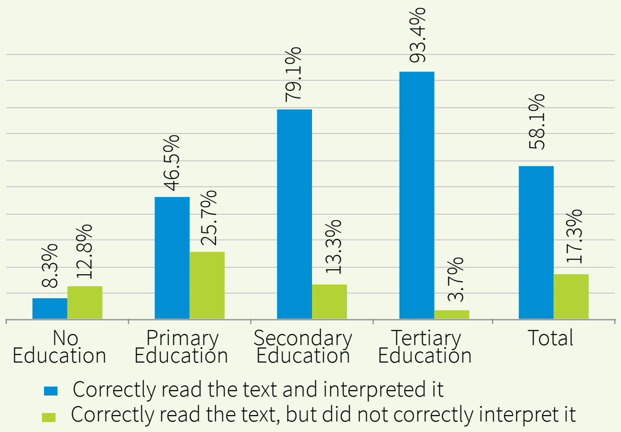
Figure 6.6: Knowledge on cost of borrowing by sex (%)



6.3 Knowledge of transaction costs

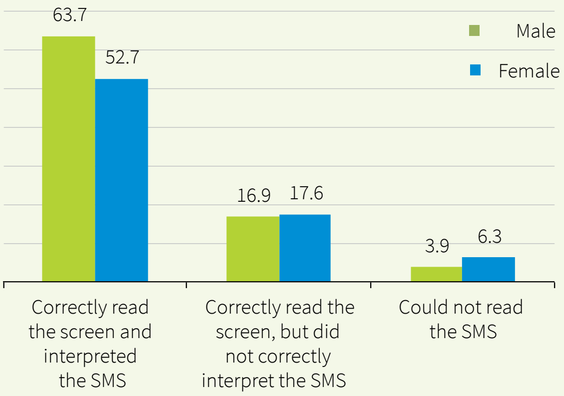
Respondents were shown a typical message showing value of transaction and associated transaction costs as a Short Message Service (SMS)/text. The survey results indicated that 58.1 percent of respondents were able to read correctly a typical message showing transaction costs on a mobile phone (**Figure 6.7**).

Figure 6.7: Knowledge on transaction costs (%)



More males (63.7 %) than females (52.2 %) read and interpreted transaction costs correctly in an SMS (**Figure 6.8**).

Figure 6.8: Knowledge of transaction costs by sex (%)

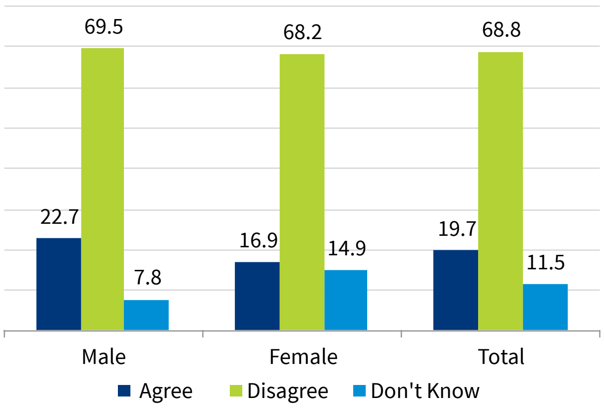


6.4 Perceptions on betting

6.4.1 Perceptions on betting/gambling

Only 20 percent of the adult population considered betting as a good income source. More males at 22.7 percent compared to 16.9 percent of females agreed that betting is a good way to make money. (**Figure 6.9**)

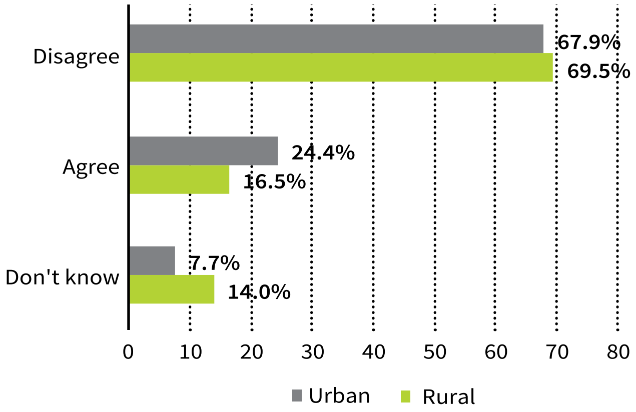
Figure 6.9: Perception of gambling as a good source of income by sex (%)



6.4.2 Perceptions on betting/gambling by residence

More Kenyans in rural areas (69.5%) than 67.9 percent in urban areas do not consider gambling as good way of making money (**Figure 6.10**).

Figure 6.10: Perception of gambling as a good source of income by residence

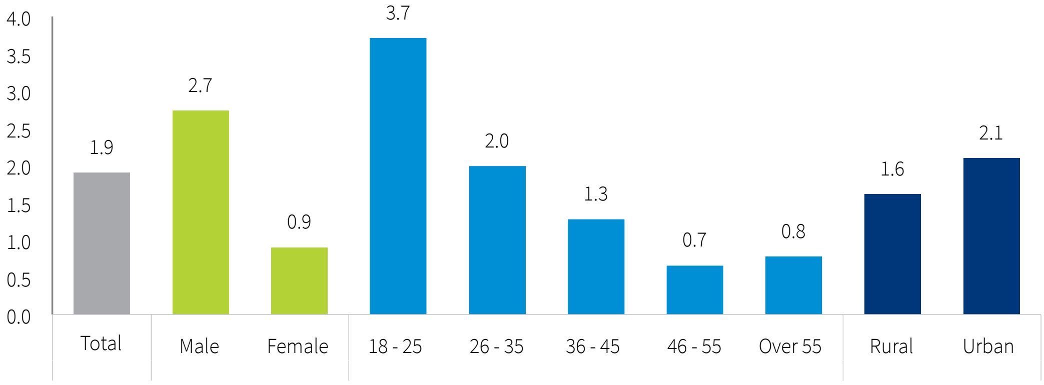


6.4.3 Use of mobile money account for betting

Overall, only 1.9 percent of mobile users indicated having used mobile money for betting (**Figure 6.11**)

The survey incorporated questions on the use of mobile money account by persons engaged in betting. The mobile money account has advantages due to unique characteristics of convenience and ease of use, privacy, and security of funds. Overall, 1.9 percent of mobile money account use it for betting with the proportion higher for males at 2.7 percent and in urban areas at 2.1 percent. The use of mobile money accounts for betting was reported by 3.7 percent of individuals aged 18 to 25 years, with lowest use being persons aged 46 to 55 years.

Figure 6.11: Users of mobile money account for betting



6.4.4 Frequency of betting

Of the 1.9 percent who responded that they used mobile money for betting, majority bet weekly (**Table 6.1**).

Table 6.1: Frequency of betting by sex, age and residence (%)

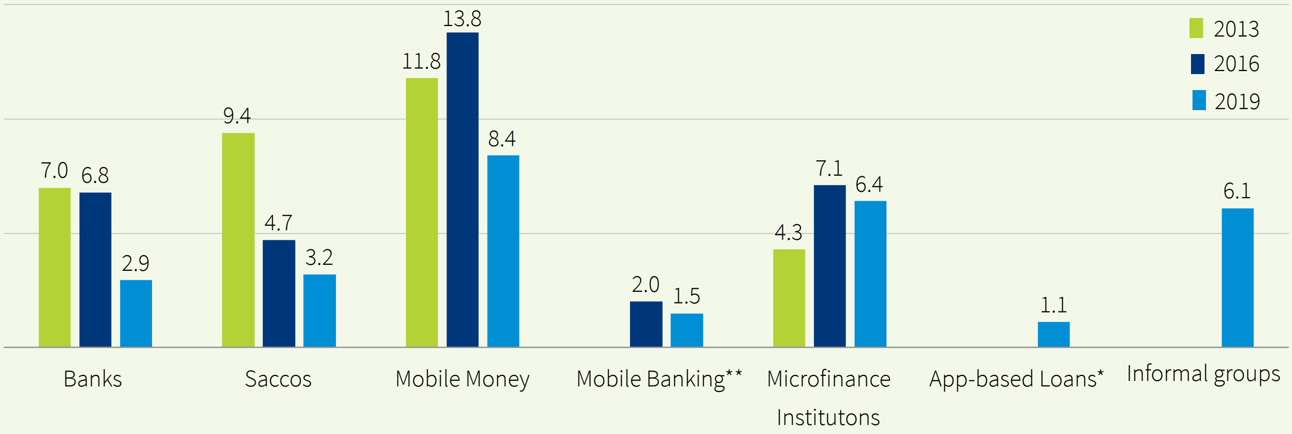
Frequency		Sex		Age					Residence	
	Total	Male	Female	18 - 25	26 - 35	36 - 45	46 - 55	Over 55	Rural	Urban
Daily	22.6	24.7	14.6	20.6	25.8	15.6	23.2	33.2	27.3	19.5
Weekly	51.7	53.0	46.7	48.7	55.3	53.6	57.0	31.1	38.6	60.2
Monthly	6.9	4.2	17.3	7.0	3.9	7.5	6.3	30.4	7.3	6.7
Intermittently (big prizes to win)	17.1	16.9	18.0	21.9	12.6	23.3	13.5	2.6	25.2	11.8

6.5 Consumer protection

Consumer protection practices entail maintaining financial system integrity and safeguarding consumers against malpractices such as fraud, unfair pricing and lack of complaint resolution.

The survey results indicate a downward trend in the instances of lost money by type of institution or device. Mobile money reported the highest incidence of money lost over all the three surveys. (**Figure 6.12**)

Figure 6.12: Lost money by different institutions 2016 and 2019 (%)

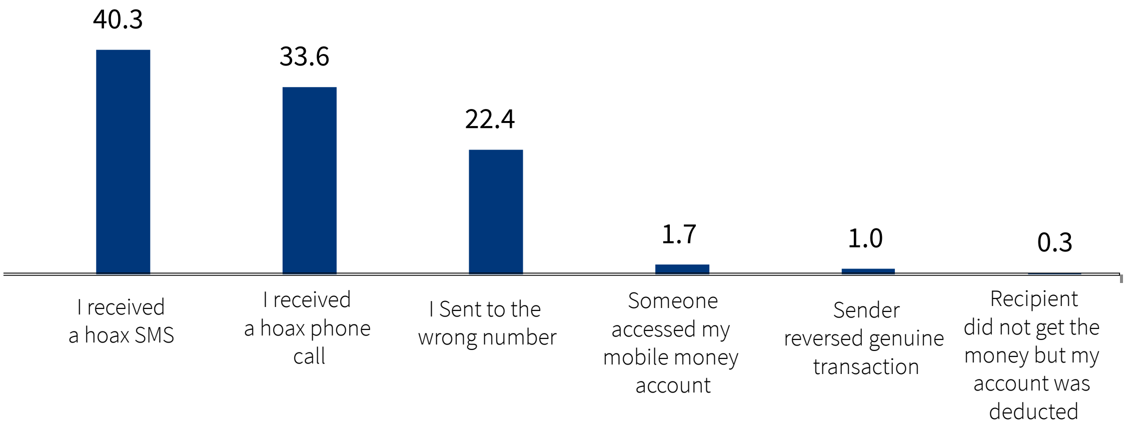


*Data for app-based loans was not collected in 2016 and

** data for mobile banking was not available in 2013

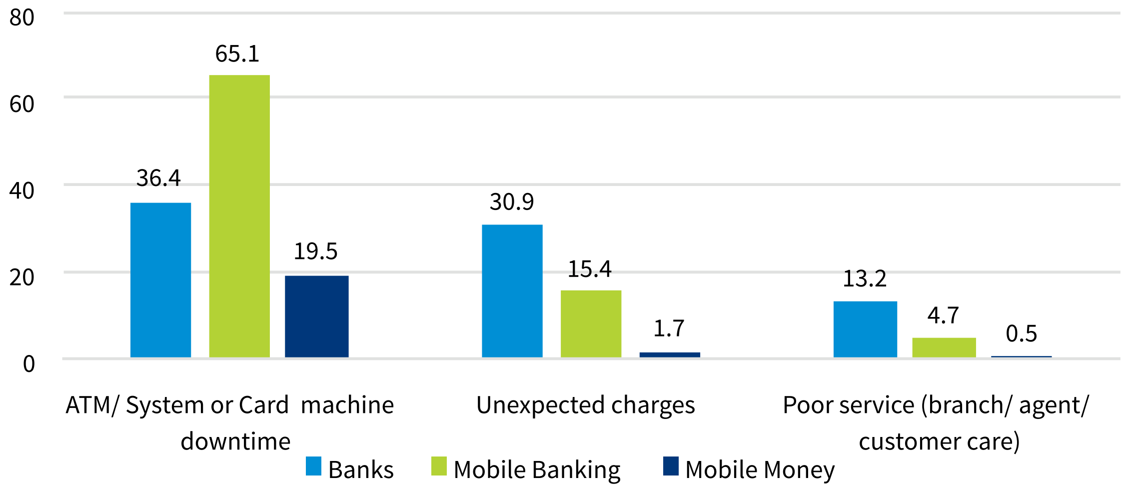
The main reason for loss of money through mobile money is attributed to fraudulent activities and sending money to the wrong mobile phone number (**Figure 6.13**).

Figure 6.13: Loss of money via mobile money, 2019 (%)



In terms of experiences with financial services used, system downtime posed the greatest challenge and inconvenience (**Figure 6.14**)

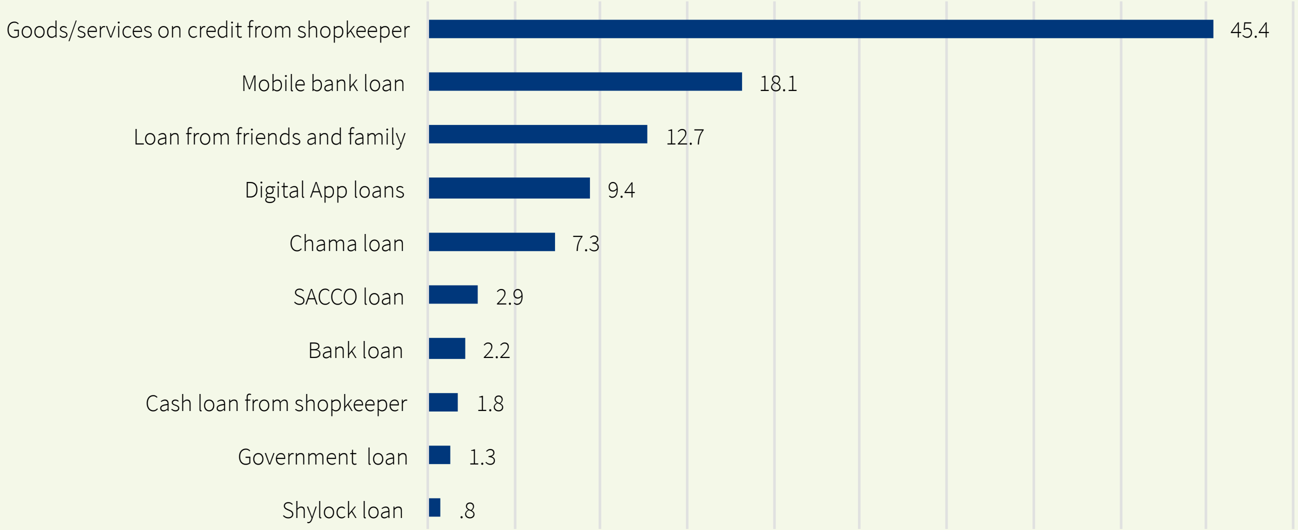
Figure 6.14: Challenges experienced on financial services used (%)



Loan defaults

The highest default rate was reported for shop keeper credit followed by mobile banking and friend/family loans (**Figure 6.15**).

Figure 6.15: Proportion of defaulters by loan type, 2019 (%)



Reasons for loan default vary by providers as indicated in **Table 6.2**.

Table 6.2: Reasons for loan default across selected providers, 2019 (%)

	Did not plan well enough	Interest/ repayment rates went up	Did not understand the terms	Poor business performance	All of my money went to basic needs such as food or utility bills	Had to pay off other loans	Partner/someone else in household lost job/source of income	Payment was more than I expected	Unexpected emergency expenditure	Forgot to re-pay on time
Bank loan	2.2	2.1	0.0	0.0	7.1	0.6	6.2	4.1	0.0	0.0
Mobile phone banking loan	18.1	28.0	26.0	32.9	20.6	7.5	8.6	28.8	4.4	0.0
Digital app loans	9.4	12.2	7.3	19.8	4.8	6.6	21.6	8.3	0.0	50.0
Goods/services on credit from shopkeeper	45.4	34.4	0.0	15.1	37.6	63.0	23.3	26.0	95.6	41.6
Loan from friends and family	12.7	17.2	0.0	0.0	13.9	9.9	27.8	11.5	0.0	8.4
Chama loan	7.3	4.8	7.5	32.2	10.2	10.3	2.8	6.5	0.0	0.0

Summary and conclusion

- Overall, Kenyans seek advice from friends and family on financial matters.
- Promotion of financial literacy is important in addressing consumer protection concerns.
- Fraud accounted for the highest incidences of loss of money on mobile money platforms.
- Mobile phone banking and digital apps have introduced new emerging risks.

SUMMARY AND CONCLUSIONS

The 2019 FinAccess Household Survey report presents results of data collected during October - December 2018 covering 11,000 households across the country. The survey targeted individuals aged 16 years and above, from scientifically selected households, designed to provide significant estimates at the national and regional level and by residence (rural and urban areas).

The household sample selection was drawn from the fifth National Sample Survey and Evaluation Programme (NASSEP V) household sampling frame. The survey dataset is robust and provide insightful findings to policy makers, regulators, private sector actors, development partners, researchers and academician.

The 2019 survey focussed more on the *usage*, *quality* and *impact/welfare* dimensions of measuring financial inclusion. In addition, the questionnaire incorporated a needs-based framework to the measure the relevance of financial services and products; financial health and livelihoods modules; and consumer protection and financial literacy. Furthermore, the survey also included independent modules on business and agricultural finance to help unravel usage of financial products and services within these livelihoods. This was in recognition of the fact that mere access to financial inclusion is not a sufficient requirement for usefulness of financial sector to households in meeting their needs and goals. This is an important step in the development of an all-inclusive financial ecosystem for Kenyans.

The survey findings show that Kenya has made significant milestones in expanding the access to financial services and products to 82.9 percent in 2019 from 26.7 percent and 75.3 percent in 2006 and 2016 respectively. Several factors contribute to this impressive outcome – rapid uptake of mobile money, adoption of transformative financial technologies and innovations, and government initiatives and policies.

We celebrate this achievement of increased access to formal financial inclusion, but we need to address the 11.0 percent of adult population still excluded and the persistent financial inclusion gaps among several demographics - age and education levels, gender, income and livelihoods, rural-urban divide, and wealth quintiles. Other areas we need to address include the 30.1 percent of the adult population relying on informal financial services and products, in particular, 'Secret Hiding Place', credit in form of cash and goods from a shopkeeper, and groups aka *Chamas*.

The survey findings also highlight consumer protection and financial education issues affecting Kenyans. These include: – high cost of accessing and maintaining a financial product or service, unexpected charges, loss of money through fraud, lack of transparency in pricing of financial services and products, and unreliable market infrastructure systems downtime for ATMs, Point of Sale (POS) devices and Mobile money and electronic funds transfer systems. The survey further points out emerging areas that require attention and deep dive studies such as rapid uptake of unregulated digital apps loans, persistence reliance on informal groups for financial services, and low financial health. These deep dive studies are required to unravel unanswered questions by identifying the missing link between rapid growth in financial inclusion and financial health of Kenyans, with only a fifth of the adult population being measured as financially healthy; and the declining role of MFIs, Insurance and Pension.

The surveys' datasets should encourage further research to better understand the underlying dynamics and drivers in order to provide possible solutions and policies to emerging challenges. The datasets released by KNBS with links provided in CBK and FSD Kenya websites should enable researchers and academicians, among other stakeholders, to undertake further analysis and research. KNBS has also established an interactive visualized web portal to enable users interact with the datasets in different formats.
